EDUCATION (3.85 GPA)

Drexel University — Philadelphia, PA
Bachelors of Computer Science — *(2014 - 2020)*

RELEVANT COURSEWORK

Cisco Networking Academy I, II
Introduction to Computer Science
Mathematical Foundations of Computer Science
Calculus I, II, III, IV
Linear Algebra
Data structures and algorithms
CompTIA A+ and Security+ Certification Course
Introduction to Computer Programming I, II
Advanced Programming Techniques
Computing and Informatics Design I, II, III
Web and Mobile Application Development

SKILLS

Programming languages:	JavaScript, C++, C, Python, Java and C#.
Client side web technologies:	HTML, CSS, jQuery, AngularJS, React
Operating systems:	POSIX standardized, Windows (7,8), Mac OSX
GNU tools:	grep, sed, awk, bash, objdump, gdb
Offensive cyber-warfare:	Metasploit, Kali Linux, nmap, Nessus, Cobalt Strike
Defensive cyber-warfare:	FTK Imager, Volatility, Cuckoo Sandbox

EXPERIENCE

Security Consultant, Security Risk Advisors (SRA)

Philadelphia, Pennsylvania: March 28, 2017—Current

At SRA, I primarily specialize in penetration testing and software development. I have performed a wide array of different assessment types for Fortune 500 companies including: Web Application Assessments, External/Internal/Physical penetration tests, Open-Source Intelligence (OSINT) collection and analysis.

Accomplishments

- Created many internal research projects for SRA to improve their OSINT collection and improve their capacity for identifying in-scope assets for penetration tests.
- Presented a talk titled “Ohhhh-Sint: Look What We Found.....” the 2018 Rochester Security Summit (RSS) which focused on Open-Source Intelligence collection methodologies and tooling.

Enterprise Network Services, GEICO Insurance Company

Bethesda, Maryland: March 28, 2016—September 17 2016

At GEICO, I worked on the Enterprise Network Services team, supporting the large enterprise network including application and services support and provisioning. My primary focus was on automating manual processes within the organization to improve operational efficiency.

Accomplishments

- Created Windows PowerShell scripts to automate interaction with an Infoblox Grid Manager IPAM utility to aid in the provisioning of server load balancing.
- Performed server load balancing on the F5 Viprion Platform:
  - Utilized SSL Server Name Indication Technology to achieve consolidation of virtual IP address assignments.
  - Worked with the F5 BIG-IP and BIG-IQ systems
- Performed server load balancing on the Nortel Alteon Platform
- Created Windows PowerShell and Python to perform command script generation through a compiled domain specific language (DSL) specification created entirely by myself using standard recursive descent parsing strategies.
- Created an entire automated platform for data scraping and centralized data aggregation from legacy network hardware using C# and Windows PowerShell.
- Worked briefly with Big Data systems like Splunk

Systems Analyst and Team Lead, B&D Consulting Incorporated

Hagerstown, Maryland: June 2, 2014—January 2, 2016

At B&D Consulting, I have worked on several projects for the United States Federal government, with

the main contract supplier being the Defense Information Systems Agency (DISA).

Accomplishments

- Obtained a SECRET Level Security Clearance from the United States Federal Government.
- Served as Team Lead during a Research and Development project on Artificial Intelligence and Policy Based Intrusion Prevention Systems.
    - Wrote a Java application which served as a proof-of-concept of the R&D effort. The application demonstrated behavior based analysis of SNMP trap data and created real time responses to the data collected which helped prevent attacks in lab testing.
- Wrote JavaScript code for a mobile widget application under a Defense Connect Online initiative that allowed for chatting between DoD agents.
- Wrote an entire resume management application from scratch, the code for which can be found on my public GitHub page (see sidebar for link to profile).
- Worked on a research project involving mobility and virtualization of mobile operating systems using secure containerization technology.

Information Technology Intern, Lockheed Martin Corporation

Gaithersburg, Maryland: June 17, 2013—June 1, 2014

I was selected as one of only 2 high school students in the state of Maryland to participate in Lockheed Martin's co-op Internship program during the school year after an initial summer internship.

Accomplishments

- Created several new internal corporate websites from scratch using WordPress as a Content Management System.
- Wrote Java code which integrated Amazon cloud based Web Services (AWS) into a large enterprise level Java (EE) cloud application.
- Completed Lockheed Martin's *Introduction to Intelligence Driven Defense* course which focused on computer incident response and digital forensics using tools such as: Volatility, Forensics Toolkit Imager, and Wireshark to perform a full post-analysis of a simulated cyber attack.
